## PROJECTS

### Customer Targeted E-commerce Website | HTML, CSS, php, Javascript, mySQL, XAMP Server

May 2022

- There are two entities who will have the access to the system. One is the admin and another one will be the registered user.
- Admin will add the product with its details such as product name, description, features, warranty, add on product and delivery date.
- User can register, login and buy products from the website. User also ask queries to the chat bot
- Chat bot will return the query result in form of text to speech.

### Invoice Generator — | CSS, Html, JavaScript

February 2024

- This project consists of an HTML, CSS, and JavaScript implementation for generating and reviewing invoices.
- The user can fill in invoice details, add items, apply tax and discount, and review the generated invoice.
- User can download the generated invoice in the form of pdf.
- Experience full responsiveness across devices for an optimal viewing experience.
